[Week - 07](#)

1) Which of the following is a type of energy?

- ☐ A. fossil fuels
- ☐ B. nuclear power
- ☐ C. traditional biomass
- ☒ D. all of the given

The correct answer is **D. all of the given.**

Fossil fuels, nuclear power, and traditional biomass are all explicitly listed as different types of energy

2) In IPCC by UN, I stands for ____.

- ☐ A. Industrial
- ☐ B. Internal
- ☐ C. International
- ☒ D. Intergovernmental

The correct answer is **D. Intergovernmental.**

The sources state that IPCC stands for the United Nations **Intergovernmental** Panel on Climate Change

Education for Sustainable Development

3) The extraction, transport and refinement of nuclear fuels results in ____.

- ☐ A. improvement of land from mining
- ☒ B. pollution of air and water
- ☐ C. replenishment of biodiversity
- ☐ D. all of the given

The correct answer is **B. pollution of air and water.**

The extraction, transport, refining, and use of fossil and nuclear fuels lead to significant environmental impacts, which include the pollution of air and water, damage to land from mining, and a loss of biodiversity

4) The greatest contributor to air pollution in China is ____.

- ☐ A. cooking and heating
- ☒ B. coal burning
- ☐ C. transport
- ☐ D. forest burning

The correct answer is **B. coal burning.**

The World Health Organization estimates that the single greatest contributor to outdoor air pollution in China is pollution from coal burning. In contrast, the major contributor in India is the burning of solid biomass for cooking and heating

Education for Sustainable Development

5) In the wake of tsunami and nuclear disaster following severe earthquake in 2011, a city in Japan set a target for ____ by 2022.

- ☐ A. hundred net energy
- ☐ B. one net energy
- ☐ C. million net energy
- ☒ D. zero net energy

The correct answer is **D. zero net energy**.

The severe earthquake, tsunami, and nuclear disaster in Japan in 2011, the city of Higashimatsushima set a target to achieve **zero net energy** by 2022

6) The term 'energy democracy' grew out of the ____ movement.

- ☐ A. hunger justice
- ☐ B. hunger revolt
- ☐ C. climate revolt
- ☒ D. climate justice

The correct answer is **D. climate justice**.

The concept of "energy democracy" grew out of the climate justice movement. This movement is based on the understanding that decisions shaping our lives should be made jointly and without being driven by the principle of profit.

Education for Sustainable Development

7) The Paris Agreement is a legally binding treaty on ____ adopted by 196 parties at COP 21 in 2015.

- ☒ A. climate change
- ☐ B. education
- ☐ C. poverty
- ☐ D. none of the given

The correct answer is **A. climate change**.

The Paris Agreement is a legally binding international treaty on **climate change** that was adopted by 196 Parties at COP 21 in Paris in 2015

8) The Government of India launched the NAPCC in 2008 outlining ____ National Missions on climate change.

- ☒ A. 8
- ☐ B. 2
- ☐ C. 100
- ☐ D. 78

The correct answer is **A. 8**.

The Government of India launched the National Action Plan on Climate Change (NAPCC) in 2008, which outlined eight National Missions on climate change

Education for Sustainable Development

9) Stubble burning usually takes place in the months of ____.

- ☒ A. October-November
- ☐ B. May-June
- ☐ C. January-February
- ☐ D. July-August

The correct answer is **A. October–November**.

According to the provided lecture material, stubble burning is the intentional setting of fire to the straw stubble that remains after grains have been harvested, and this typically occurs in the months of October and November, between the Kharif and Rabi seasons.

10) Stubble burning is ____.

- ☒ A. intentional
- ☐ B. natural
- ☐ C. healthy for air quality
- ☐ D. related to burning of paper

The correct answer is **A. intentional**.

Stubble burning is defined as **intentionally setting fire to the straw stubble** that remains in the fields after grains, such as rice and wheat, have been harvested.

Furthermore, the practice is a major environmental challenge rather than a natural occurrence or something that is healthy for air quality. Stubble burning releases a huge amount of harmful pollutants and greenhouse gases (such as NO₂, N₂O, CO₂, SO₂, and CH₄) into the atmosphere. This severe air pollution contributes to respiratory and cardiovascular diseases, reduces visibility for traffic, and the excessive heat from the fires destroys valuable soil nutrients and microbes.

Education for Sustainable Development

Week 7 : 3. ESD & Sustainability ESD for achieving SDG-4.4

- d) Promoting good mental health & wellbeing
- e) Inclusive education & social transformation

1. Which of the following is a type of energy? D. all of the given
2. In IPCC by UN, I stands for ____. D. Intergovernmental
3. The extraction, transport and refinement of nuclear fuels results in____. B. pollution of air and water
4. The greatest contributor to air pollution in China is ____. B. coal burning
5. In the wake of tsunami and nuclear disaster following severe earthquake in 2011, a city in Japan set a target for ____ by 2022. D. zero net energy
6. The term ‘energy democracy’ grew out of the ____ movement. D. climate justice
7. The Paris Agreement is a legally binding treaty on ____ adopted by 196 parties at COP 21 in 2015. A. climate change
8. The Government of India launched the NAPCC in 2008 outlining ____ National Missions on climate change. A. 8
9. Stubble burning usually takes place in the months of ____. A. October–November
10. Stubble burning is ____. A. intentional
